Each tablet contains:

Sertaconazole Nitrate..... 500mg

CLINICAL PHARMACOLOGY

Mechanism of Action:

Sertaconazole, an azole antifungal agent inhibits the synthesis of ergosterol by inhibiting the fungal cytochrome P-450-mediated 14 alpha-lanosterol demethylase enzyme. This enzyme functions to convert lanosterol to ergosterol. Ergosterol is a key component of fungal cell membranes and lack of this component leads to fungal cell injury by leakage of key constituents in the cytoplasm from the cell.
